*** Notes of Significance ***

Fires highlighted in yellow have submitted a final ICS-209

Evening Brief

Date: Monday July 20th, 2020

Weather Summary

Southerly moisture will continue to move into the Great Basin through the work week. Increasing, generally dry thunderstorm activity in Nevada/western Utah (Tues) and southwest Idaho (Wed) will likely result in new large fires. **High Risk for Lightning has been issued in those areas.** Over central/eastern Utah, thunderstorms will also be increasing through mid-week but have a better chance of producing precipitation which will decrease overall large fire potential in those areas on Wednesday and Thursday.

Drier air moves into most of the western and central Great Basin by the end of the week thru the upcoming weekend, which should continue to increase chances of holdover fires.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light to Moderate Initial Attack Activity
National	PL 3	New Fires and Acres: 23 fires Acres; 4977.6

Fuels/Fire Potential

Fire potential will be increasing over NV and southwest Idaho this week as thunderstorms roll into the Great Basin. Grasses and sagebrush remain very dry region wide and will carry fire even in the absence of wind. Fuels at the higher elevations are still somewhat green especially over Idaho/Wyoming keeping the large fire threat somewhat limited for now.

Resources:

Aviation within the Great Basin

- 1 VLATs, 4 LATs, 4 Scoopers
- 23 SEATs, 3 LP, 10 AA, 0 ASM
- 9 Type 1 Helicopters
- 9 Type 2 Helicopters
- 18 Type 3 Helicopters
- 1 Helco

Crews Committed within the Great Basin

- 18 IHCs / All Committed GACC
- 25 T2 IA / All Committed GACC

Current Incident Details
